

NET ZERO

We know that we need to reduce our emissions of carbon and other greenhouse gases rapidly. We might be able to capture and store some carbon by planting trees or through new carbon capture and storage technologies. But the first option has to be to minimise emissions in the first place.

Our Yorkshire and Humber Climate Action Plan has identified 22 actions to tackle net zero across the region, covering: Targets; Energy; Buildings; Transport; Business, Industry & Infrastructure; Land Use and Nature; Circular Economy; and Lifestyles and Consumption.
