

**Mapping CURRENT STATE impact on climate and other areas – questions to consider:**

- What projects / activities are you doing or could do that positively impact climate and other additional outcomes (nature, equity, health)?
- What’s helping / enabling those to work, what’s been challenging to do and what would you like to do? Who could you collaborate with?

Business areas to consider:	What are you already doing that positively impacts climate and other outcomes e.g. nature, health, equity?	What’s working well/not so well and what or who has enabled that to happen? (e.g. legislation, financing, internal support, partnerships, R&D)	What would you like to do and who could you collaborate with?
Internal operations, mindsets and employee policies			
Products and Services			
Supply Chain actors			
Wider enabling environment: policy, researcher, influencers, standards, partnerships			

## NOW WHAT?

- **Looking across the projects, what stands out as critical enablers or blockers? What does that mean for your organisation?**
  - *i.e. what can you do internally, what might you need to collaborate on and with whom?*
  
- **What else might need to be true to achieve your vision?**
  - *i.e. what other levers might need to be pulled? (Are there research gaps, a need for different incentives, missing connections?)*
  - *What can you or others do to influence or help solve these? Who else might need to act differently, who can influence them?*
